Foreword

This manual contains safety, operation, maintenance, and adjustment information. The procedures are designed to provide the best performance of the machine in an effective and economical way. In order to obtain it, remember the next basic rules.

- This manual should be stored in the operator’s compartment of any machine where this attachment is used.

- Before inspection, maintenance, or operating the VTS, read and understand this manual completely.

- Since all of the explanations in this manual may not be thoroughly understood at first, repeat reading it until abilities as an operator are obtained and developed for proper operation.

- Further abilities as an operator outside of descriptions in this manual can be obtained from experience during normal operations and under proper supervision.

- Because of continuing improvement and advancement of product design, the shape of the attachment in the illustrations may be partly different from your machine. Whenever a question arises regarding your machine, or this publication, please consult your local Loegering dealer or Loegering Mfg. at 701-347-5441 for the latest information.

Always provide the serial number of your VTS when ordering parts, requesting service, requesting warranty, or any other information.  
The serial number plate is located on top of the tunnel near the rear hub. Please record the serial number in the space provided and on the warranty registration card.

Serial Numbers:  Right VTS________  Left VTS ________
SAFETY INFORMATION

We offer you basic and important rules and precautions for safe operation.

Read, understand, and observe them before starting operation. This is the most essential way to prevent accidents.

Wrong operation, inspection, or maintenance can cause personal injury or death.

Throughout this manual and on the VTS, precautions are provided with marks and classified by the words “Danger”, “Warning”, and “Caution” according to their extent of danger.

The classification is as follows:

⚠️ DANGER: indicates an imminently hazardous situation which, if not avoided, will cause death.
⚠️ WARNING: indicates a potentially hazardous situation which, if not avoided could result in death or serious injury.
⚠️ CAUTION: indicates a potentially hazardous situation which, if not avoided, could result in minor or moderate injury. It may also be used to alert against possible damage to the machine and its components.

We have made every effort for you to prevent accidents during operation, however, we cannot be held responsible for predicting every kind of danger in all operating conditions. It is the owner or user of the machine who is responsible for ALWAYS paying attention to operate the machine; as well as reading and understanding this manual enough to obtain the essential knowledge and skills fundamental to correct machine operation.

⚠️ WARNING

- **BEFORE** inspection, operation, or maintenance of the VTS, be sure to read and understand this manual.
- Incorrect operation or maintenance of the machine can cause an accident and serious injury or death.
- Keep this manual on hand during operation so that you can immediately consult it when necessary. If it should be missing or damaged, contact Loegering Mfg. for a replacement.
- There are various kinds of federal, state, and local regulations that effect construction and industrial machinery. Since the regulations are subject to change, and differ from one locale to another, it is impossible for us to provide such information in this manual. It is the responsibility of the owner or user to be familiar with the regulations.
- Specifications and materials of the VTS are subject to change without any obligation on the part of the manufacturer.
SAFETY TIPS

This section explains tips which you will find throughout this manual and on the VTS Track System. Periodically check labels and plates containing those tips for damage. If they are damaged, clean or replace them. For replacement, contact Loegering.

1-1 GENERAL

OBSERVE THE BASICS FOR SAFE AND EFFECTIVE OPERATION.

The operator’s knowledge, skills, and experience are the most important to utilize the machine and VTS. Therefore, be sure to understand operation procedures and to take necessary training.

OPERATOR SHOULD BE QUALIFIED.

Only qualified operators should operate the machine, and those operators should only do so when physically and mentally alert. The operator should be familiar with the hazards and necessary safety measures unique to the operation of VTS.

READ AND UNDERSTAND THE INSTRUCTIONS AND WARNINGS.

This manual, plates, and labels on the machine contain necessary instructions and warnings for safe operation. Read and understand all safety instructions and warnings, failure to do so can result in injury or death. Loegering will be glad to answer any questions. If the manual, plate, or label is missing or damaged, contact Loegering for a replacement.

Remember that the safety tips that we provide cannot cover every kind of danger that you may encounter during operation.

WEAR PROPER WORKING CLOTHES.

Wear working clothes that fit closely. Avoid loose jackets, shirt sleeves, rings, and other jewelry that may get caught in moving parts of the VTS. Always wear protective items such as hard hats, safety glasses, and ear protection as required.

PERFORM “WALK-AROUND” INSPECTION.

Walk around the machine to check for any safety concerns before operation of the machine.

PERFORM SYSTEM CHECK.

Use the VTS slowly at first to ensure proper operation of all moving parts. Slow operation allows the operator to notice potential safety hazards before they occur.
CONDUCT ALL MANEUVERS WITH THE VTS CAREFULLY.

Avoid making sharp turns with the VTS installed. Sharp turns or standing pivot turns will reduce the usable life of your VTS system.

CAREFULLY LOAD AND UNLOAD THE MACHINE.

The VTS system can increase the width of your machine. Always ensure that the trailer is the correct size to prevent damage to trailers and/or the VTS.

CAPACITIES

When using the VTS system the machine will be able to push and lift larger loads; however, Loegering Mfg. recommends you do not exceed the manufacture’s push and lift maximums.

The maximum machine weight for the large VTS is 10,500 lbs (4,763 kg). Maximum for the small VTS is 7,500 lbs (3402 kg).

PERFORM MAINTENANCE CAREFULLY.

Maintenance work can be hazardous if not done in a careful manner. All personnel should realize the hazards and strictly follow safe practices. Before performing any maintenance or repair work, consult the instruction manual.

BE CAREFUL AROUND MOVING PARTS.

Stay clear of all rotating or moving parts such as sprockets and rollers. Do not allow any object to come near moving parts. The object could be thrown out of the undercarriage.

ALWAYS CLEAN THE VTS

 Maintain the cleanliness of the machine and VTS to ensure proper and safe operation. Remove dirt, debris, and any tools used for maintenance from the undercarriage system.

ALWAYS USE APPROPRIATE SAFETY EQUIPMENT.

Wear personal safety equipment when necessary and use mechanical lifting devices to aid in the service and maintenance of the VTS.
There are several specific safety signs on your VTS. Their exact location and description of the hazard are reviewed in this section.

Please take the time to familiarize yourself with these safety signs.
Nomenclature

Typical Example
1. Rubber Track
2. Rear Hub Assembly
3. Tension Adjustment Turnbuckle
4. Tension Roller
5. Tension Arm Assembly
6. Idler Assembly
7. Front Hub Assembly
8. Torsion Arm
9. Bogey Wheel
10. Front Tunnel Assembly
11. Rear Tunnel Assembly
12. Drive Sprocket
13. Split Bogey
CAREFULLY READ THE FOLLOWING CAUTIONS AND NOTES BEFORE YOU START YOUR INSTALLATION:

⚠️ CAUTION:
1. Read the VTS installation procedure before starting installation. Failure to follow the installation instructions could cause equipment damage and/or void warranty. Failure to follow installation instructions could result in injury and/or death.
2. The installation of your VTS system includes the use of a forklift and/or mechanical hoist, read and understand the operation of this equipment before starting any VTS installation.
3. Always wear personal protective equipment any time work is performed on your VTS. This equipment should include safety glasses, ear protection, and appropriate work boots.
4. Visually inspect all equipment used in the installation of VTS.
5. The VTS is a heavy piece of equipment. Special precautions need to be taken to ensure the safety of all personnel. The VTS should be supported at all times by equipment that is rated to carry the amount of weight. Use of equipment that is not rated for the weight of the VTS could result in injury and/or death.
6. When the VTS is being moved, all personnel should stand clear of the VTS.
7. Follow your skid steers manufacturer’s operation manual and observe all safety precautions.

Your VTS Versatile Track System ® comes preset from the factory complete and ready to install on your skid steer.
1. Raise and block the boom according to the manufacturer’s instructions, (Fig. 1) allowing safe access to the front of the machine. Turn off machine when not using it for the installation process.

2. Following your skid steer manufacturer’s instructions, raise the skid steer until the center of the drive axles are a minimum of 22” off the ground. Using jack stands or equivalent, securely block the skid steer (Fig. 2)

3. Remove tires following your skid steer manufacturer’s instructions.

Note:
If wheel spacers are required they must be installed at this time. Please contact Loegering Mfg. if you are unsure if your machine requires wheel spacers.
Safety Precautions:

1. Always wear appropriate eye, ear, hand, and foot protection while installing wheel spacers.
2. Ensure that the machine is secure on the jack stands before starting install of wheel spacers.

Installing Spacers without studs

1. Remove wheels and thoroughly clean the hub flange surface of all foreign materials including dirt, grease, loose paint, etc. Failure to remove all foreign material will cause the spacers to become loose resulting in damage to the spacer and/or studs.
2. Inspect spacers for any excessive paint or foreign material prior to installation.
3. Install spacers. Spacer should fit easily on wheel hub - if there is any interference, contact Loegering Mfg. Inc. before reinstalling wheels.
4. Reinstall wheels and torque nuts to the manufacturer’s recommended specification.

**Bobcat 963 and 970 machines:** Reach nuts are supplied with the spacers, use them in lieu of the nuts removed from the machine. Save the nuts removed from the machine so that the wheels may be reinstalled when the spacers are removed.

5. Failure to follow these instructions will void the warranty on the spacers.
Installing Spacers with studs
1. Remove wheels and thoroughly clean the hub flange surface of all foreign materials including dirt, grease, loose paint, etc. Failure to remove all foreign material will cause the spacers to become loose, which will result in damage to the spacer, studs and/or VTS.
2. Inspect spacers for any excessive paint or foreign material prior to installation.
3. Install spacers. Spacer should fit easily on wheel hub - if there is any interference, contact Loegering Mfg. before tightening nuts.
4. Tighten nuts evenly to allow spacer ring to center itself on tapered nuts.
5. **Torque ½" nuts 95 ft-lbs. (128.8 N m), 9/16" nuts 130 ft-lbs. (176.26 N m), and 5/8" nuts 190 ft-lbs (257.6 N m).**
6. Reinstall wheels or VTS and torque nuts to the skid steer manufacturer's recommended specification for installing wheels, and 190 ft/lbs (258.40 N m) for the VTS.
7. Failure to follow these instructions will void the warranty on the spacers.
1. Using a forklift or similar lifting device, lift the VTS at one of three places.
   a. Below the track.
   b. Below the tunnel, between the bogey wheels. (Preferred)
   c. Below the top of track

**IMPORTANT:** Make sure the front of the skid steer’s hubs and the front of the mating hubs on the VTS are clean. Excessive dirt, mud, gravel etc., will interfere with the installation.

2. Start by installing the VTS onto the front hub of the skid steer.

3. Align the front hub assembly. The front hub assembly will pivot forward approximately 3-4”. Rotate the hub assembly forward and block it, turn the hub spindle until the spindle holes align with the studs on the skid steer hub.

**Caution:** While rotating the front hub ensure that hands and fingers remain clear of any pinch points.

4. You may have to take the block out and lower and / or raise the hub assembly slightly in order to line up the spindle holes with the studs on the skid steer.

5. When the holes on the front spindle line up with the studs, slide the VTS onto the front hub.

**Caution:** Be sure that all personnel are clear of the area before moving the VTS onto the machine. Failure to do so could result in injury and/or death from being crushed in between the VTS and the machine.

6. Install as many wheel nuts as possible on the front hub assembly (3-4 typically) and tighten. **Note:** If your machine is equipped with flange type wheel nuts you must replace them with 90° tapered wheel nuts. Failure to use 90° tapered wheel nuts may cause injury, damage to the lug studs, and/or void warranty.

7. When using a fork lift, use the side shift capabilities to slide the VTS towards the rear of the skid steer until the rear sprocket lines up with the rear hub. Note: A hoist can also accomplish this step.

8. Have an operator start the skid steer and rotate the hub until the studs line up with the VTS. **Caution:** Stay clear of the VTS while the skid steer is in operation.

9. When the holes on the rear sprocket line up with the studs, slide the VTS onto the rear hub.
2-5 Installing the VTS

Caution: Be sure that all personnel are clear of the area before moving the VTS onto the machine. Failure to do so could result in injury and/or death from being crushed in between the VTS and the machine.

10. Install as many wheel nuts as possible, typically 3 or 4.
11. Have an operator start the skid steer and slowly rotate the hubs forward until all the wheel nuts can be installed.
12. Turn machine off in between rotations to install additional wheel nuts.
   Note: Torque all wheel nuts to 190 ft/lbs (257.6 N m). Failure to properly torque wheel nuts can cause injury, damage to equipment and void the warranty.
13. Repeat the installation procedure for the other side.

14. Once both sides have been installed, follow the instructions in section 3 and check the tension on the track. Ensure that the tension is between 1” and 1.5” (2.54 to 3.81 cm).
15. Remove jack stands or blocks and lower the machine.
16. Check both sides for proper installation before using the machine.

IMPORTANT
Before putting the skid steer with VTS into use, take the machine for a test drive, bring it back in and check the tension again. Also check the torque on the wheel nuts to ensure that all torques are correct.
INSPECT YOUR VTS BEFORE EACH OPERATING SESSION

1. Check the rubber track for signs of wear. Check for any cracks, cuts, missing pieces, or excessive wear. (Fig. 1 & 2)

2. Ensure that all bolts are tight and that none are missing.

3. Check for any damage to the metal components of the undercarriage. Look for cracks, abnormal wear, or bent components.

4. Visually inspect all tension rollers, bogey wheels, and idlers for signs of damage or excessive amounts of wear. (Fig. 3)

5. Inspect the sprocket for missing teeth, cracks, or excessive wear.
Tracks check and adjust

- **Measuring Track Tension**
  - Drive the machine forward to ensure the track is evenly tensioned across the entire VTS.
  - Lower skid steer bucket until the front of the VTS is off of the ground. (Fig 5)
  - Measure the distance from the inside edge of the track to the bottom of the bogey wheel. A properly adjusted track will have 1 to 1.5 inches (2.54 to 3.81 cm) of slack. (Fig 6)
  - **If more than 1.5” or 3.81cm the track needs to be tensioned.**

- **Adjusting Track Tension**
  - Drive the machine forward to ensure the track is evenly tensioned across the entire VTS.
  - Lower skid steer bucket until the front of the VTS is off of the ground. (Fig 5)
  - Loosen the two ¾” tension arm bolts on the tension arm assembly. (Fig 7.)
  - **Important:** Failure to loosen the tension arm mounting bolts (on both sides of the VTS) could result in bending the tension arm.
  - Determine what style tensioner that you have. The two styles are the hexagon turnbuckle (Fig 7.) and the round weldment (Fig 8.) on the next page.
3-1 When Required Maintenance and Checks

- **When adjusting the Turnbuckle style tensioner.**
  - Use a 1 7/8” wrench to loosen the jam nut.
  - Turn hexagon adjuster shaft clockwise until proper tension of 1 to 1.5” (2.54 to 3.81 cm) is obtained.
  - Retighten the jam nut and lower the machine.
  - **Important:** Retighten both ¾” tension arm mounting bolts to 376 ft/lbs. (509.8 Nm).

- **When adjusting the weldment style tensioner.**
  - Use a 1 ½” wrench to loosen the jam nut.
  - Turn the adjuster nut clockwise until the proper tension of 1 to 1.5” (2.54 to 3.81 cm) is obtained.
  - Retighten the jam nut and lower the machine.
  - **Important:** Retighten both ¾” tension arm mounting bolts to 376 ft/lbs. (509.8 Nm).

**IMPORTANT**

It is recommended that the track tension is checked after 15 to 20 hours of operation on a new track. After the initial check, check your tension every 50 hours thereafter to ensure optimum performance of your VTS. If running on side hills, keep track tension at 1” (2.54 cm).
Rubber Track Inspection and Maintenance:
- If steel cord is exposed because of damaged rubber, replace the track with a new one immediately.
- When a break of a steel cord is detected, replace the track immediately. If you leave it as it is, the rubber track can break without expectation, and could cause a serious accident. (Fig. 1)
- If large cracks are noticed in the rubber track, contact Loegering for instruction.

**VTS Maintenance Schedule**

3-2 Replacing the Hub or Torsion Tube; Safety.

⚠️ Caution:
1. The torsion tube and hub assembly can only be removed after the VTS has been removed from the machine.
2. Follow the installation and removal instructions to complete VTS removal.
3. Read and understand all instruction for torsion tube and hub removal before starting the removal.
4. The assembly is a heavy object and needs to be removed using a hoist. Read and understand all manuals for the hoist that is to be used before starting removal process.
5. Always use a hoist when handling the assembly.
6. Wear all personal safety equipment while completing any service on the VTS. Safety glasses, ear protection, and proper work boots are required.
7. The assembly creates a pinch point, use caution and keep hands and fingers clear of the pinch point when removing the assembly.
3-3 Replacing the Hub or Torsion Tube

**Note:** VTS must be removed from machine before attempting to remove hub and torsion tube. Consult installing the VTS section for removal instructions.

1. Remove torsion arm.
   a. Locate torsion arm without “up stop” arm. 
      **Note:** All VTS, except VTS for Bobcats, will have the torsion arm without the up stop arm toward the outside of the skid steer.
   b. Using a 1 ½ socket remove the 1-14UNC x 2” bolt on the upper part of the torsion arm. Fig. 1
      **Note:** This bolt is torqued at the factory to 750 ft/lbs. (1017 N m)
   c. Using a 1-1/8”socket remove the ¾ x 2” bolt from the lower torsion arm on the opposite side.

2. Remove front hub assembly
   a. Carefully lift the front hub assembly out of the frame.

3. Remove hub assembly. Fig 1

4. Install new hub assembly in the same position as the old hub. Fig. 1
   a. Position hub on torsion tube and secure using ½ x 1.5” bolts and nuts. 
      **Torque to 110 ft/lb.**
      (149.14 N m)
   b. Reinstall assembly onto the VTS.

5. Install VTS on skid steer per owners manual.

6. Adjust track tension per owners manual.

**Note:** As of February 2007 the down stop assembly has been moved from the hub to the tunnel on 65+ & 86+ VTS. The rubber stop, part # 400540, will still be available for older hubs for a limited time however it is highly advised to switch to the new down stop for better performance. In addition, new replacement hub assemblies will no longer have holes for down stop assemblies and require the purchase of down stop assembly part # 600544. Please see next page for instruction.
1. On VTS installed on all machines except Bobcat position down stop on the tunnel cross brace, centered under the hub assembly, as shown in the Figure 1 bullet A, and secure with bolt & self locking nut included with assembly. On VTS installed on Bobcat machines position the down stop on the tunnel as shown in the Figure 1 bullet B.

Note: If the cross brace on the tunnel measures 3”, the down stop will need to be trimmed .25” on each side. Please contact Loegering for instruction.

3-5 Replacing the Tension Arm Assembly; Safety.

Caution:
1. The tension arm assembly can only be removed after the VTS has been removed from the machine.
2. Follow the installation and removal instructions to complete VTS removal.
3. Read and understand all instruction for tension arm removal before starting the removal.
4. The assembly is a heavy object and needs to be removed using a hoist. Read and understand all manuals for the hoist that is to be used before starting removal process.
5. Always use a hoist when handling the assembly.
6. Wear all personal safety equipment while completing any service on the VTS. Safety glasses, ear protection, and proper work boots are required.
7. The assembly creates a pinch point, use caution and keep hands and fingers clear of the pinch point when removing the assembly.
3-5  Replacing the Tension Arm Assembly

1. Follow torsion arm and hub assembly removal instructions to VTS must be removed from machine, consult owners manual for removal instructions.

2. Before starting, note location of rollers and position of tension arm slot. Replace one side at a time using one side as a reference when reassembling.

3. Remove the torsion arm and hub assembly.

4. Remove tension roller assembly. (Fig.1 on previous page.)
   a. Using a 1-1/8” x ½ drive socket loosen the two 3/4” bolts securing the tension arm assembly to the frame, do not remove these bolts.
   b. Loosen the tension adjustment screw until it can be lifted out of the frame. Use a hoist to lift the front half of the track to provide clearance for the tension arm assembly to be removed.

5. Lift the tension roller assembly up and out.

6. Replacing tension rollers.
   a. Note position of rollers before removing. If reconfiguring VTS or moving rollers to another position contact Loegering for a drawing for correct position.
   b. Install roller assembly using two ¾ x 1 ½ gr. 8 flange bolts and torque to 376 ft/lbs (509.8 N m).

7. Tension arm assembly installation. Ref. Fig. 3
   a. Using a hoist, lift the front half of track to provide clearance for the tension arm assembly.
   b. Position the correct slot on the tension arm assembly over the bolts loosened in step 4.
   Do not tighten bolts at this time; tighten bolts after track has been properly tensioned.
   c. Position the adjuster screw into holder on front chassis. Note: If you can not get the adjuster screw into the holder it may be necessary to use a bottle jack or similar lifting device, to lift the tension arm assembly. Center the jack under the adjusting screw mounting brace or center under the upper tension roller (a cradle is required for this).

8. Install front hub assembly.
   a. Extend adjuster fully to allow clearance for the hub assembly.
   b. Slide assembly into the frame.
3-5 Replacing the Tension Arm Assembly

(Step 8 continued)

c. Position torsion arm on assembly and secure using 1-14UNC x 2” Gr. 8 bolt on the upper arm and a 3/4 -10UNC x 2” Gr. 8 bolt on the lower.

Torque upper bolt to 750 ft/lbs. (1017 N m) and lower bolt to 376 ft/lbs (509.8 N m).

3-6 Replacing the Rubber Track; Safety

⚠️ DANGER: Please read all caution statements and notes before proceeding.

When elevated on the forks the VTS may work itself forward and could come off the forks. Frequently check to ensure the VTS is securely positioned on the forks.

1. Replacing the track on your VTS system includes the use of a forklift and/or mechanical hoist, read and understand the operation of this equipment before starting any VTS track replacement.

2. Always wear personal protective equipment any time work is performed on your VTS. This equipment should include safety glasses, ear protection, and appropriate work boots.

3. Visually inspect all equipment used in the track replacement.

4. The VTS is a heavy piece of equipment. Special precautions need to be taken to ensure the safety of all personnel. The VTS should be supported at all times by equipment that is rated to carry the amount of weight. Use of equipment that is not rated for the weight of the VTS could result in injury and/or death.

Note: After the VTS has been reassembled and all bolts have been properly torqued, it can be reinstalled on the machine by following the instructions in section 2-2.
5. When the VTS is being moved, all personnel should stand clear of the VTS.

6. Follow your skid steers manufacturer’s operation manual and observe all safety precautions.

7. When lifting components of the VTS that weigh over 30 lbs. (13.6 kg) it may be necessary to use an approved hoist.

3. To assist in the installation of a new track the following items will assist in making the job easier and less time consuming: Forklift, scissor lift, 1 ½ x ¾ drive socket, 1 1/8 x ½ drive sockets, pump jack and hoist.

4. Follow instructions in section 3-3 to remove the torsion arm and hub assembly.

5. Follow instructions in section 3-5 to remove the tension arm assembly.

6. Remove the Track
Make sure the bottom of the track is up against the bottom of the bogeys to allow the slack to go to the front of the VTS.

   a. With a pry bar move the rear sprocket clockwise this will move the slack in the track to the front of the VTS. (Fig. 1)

1. Use a forklift or similar device to pickup the VTS. For ease of taking off the old track and putting on the new track pick the VTS up from the inside (skid steer side) under the tunnel with the forks sticking out approximately 6 inches on the opposite side. Lift the VTS off the ground approximately 32 inches.

2. Replace one side at a time using the other side as a reference.
7. Lower the front of the track so it elongates. Place a pry bar between the front idler and the inside of the track and pry outwards so the idler pops out of the guide teeth. (Fig. 2)

8. Move to the rear of the VTS and place your hoist strap or chain in front of the sprocket, lift up the track with the hoist. (Fig. 3)

9. Using a pry bar, pry the track upwards until the sprocket is out of the Track Idler Guides.

10. Once the track is off the sprocket place a pry bar between the rear idler and the inside of the track and pry outward so the idler comes out of the Track Idler Guides. (Fig. 3)
Installing the new track

1. Pickup the new track with a hoist or similar device. Start at the rear of the VTS.
   a. Guide the rear idler into the Track Idler Guides. Fig. 4
   b. Use a scissors lift or similar device to lift up the bottom of the track until the track touches the bottom bogies. This elongates the track in order to get it over the sprocket and front idler. Fig. 4
   c. Lift the top of the track in front of the sprocket with a hoist or similar device. Fig. 4
   d. With a pry bar between the top of the sprocket and the track lift up on the track until the sprocket is in the Track Idler Guide. Fig. 4
   e. With a pry bar move the rear sprocket clockwise, this will move more slack to the front of the VTS. Fig. 4. Lower the hoist to relieve the tension on the track.
   f. With a pry bar between the front idler and the track, pry outward until the front idler goes into the Track Idler Guides. Fig. 5

2. Reinstall your tension arm assembly.
3. Reinstall the torsion arm and hub assembly.
4. Ensure that all bolts are torqued according to the torque diagram included with this manual.
5. Reinstall VTS on the machine using instructions in section 2-2.
Replacing the rubber track by placing the undercarriage into the track.

1. Start with the track setting on the floor with the upper portion suspended by a hoist.
2. Use a forklift or similar lifting device to move the undercarriage into the track.
   a. Lift the top of the track above the sprocket with a hoist or similar lifting device. (Fig. 1)
   b. Approach the track at an angle so the rear idler can be placed in the track idler guide. (Fig. 1)
   c. With a pry bar between the top of the sprocket and the track lift up on the track until the sprocket is in the Track Idler Guide.
   d. Lower the track onto the sprocket. (Fig. 2)
   e. With a pry bar, rotate the sprocket towards the front of the VTS to move the slack to the front.
   f. Lock the sprocket with the pry bar. (Fig. 3)
3-7 Replacing the Rubber Track

g. Use a pry bar to move the track so the front idler is in the track idler guide. (Fig. 4)
3. Reinstall your tension arm assembly. (Fig. 5)
4. Reinstall the torsion arm and hub assembly. (Fig. 6)
5. Reinstall VTS on the machine using instructions in section 2-2.

After the new track is installed,
1. Ensure that all bolts are torqued according to the torque diagram included with this manual.
2. Ensure that all lug nuts are torqued to specification.
3. Check the track tension after the VTS is installed on the machine.
4. Check the track tension again after 15 to 20 hours of initial use.
5. Routinely check track tension at 50 hour intervals throughout the life of the track.

MATERIAL SAFETY DATA SHEET

Polytac(TM) EP-2

1. CHEMICAL PRODUCT AND COMPANY IDENTIFICATION

Synonyms: Not Established
Formula: Mixture
Chemical Family: Hydrocarbon
CAS Number: Mixture
SAP Code: 1013026; 1013027; 1013028; 1013029; 1013030; 1033017
Product Code: 94250
MSDS Number: US422400
NFPA Ratings: Health 0, Flammability 1, Reactivity 0
HIMS Ratings: Flammability 1, Reactivity 0, Health 0
Intended Use(s): General Purpose grease for automotive, industrial and agricultural use

The intended use of this product is indicated above, if any additional use is known please contact us at the Technical Information number listed below.

Manufactured by:
Phillips 66 Company
A Division of Phillips Petroleum Company
Barryville, Oklahoma 74404

Phone Numbers
Emergency: (918) 661-8118
Technical Information: (800) 786-0050
For Additional MSDS: (918) 661-5974

3. HAZARDS IDENTIFICATION

Emergency Overview
Polytac(TM) EP-2 (US422400)

Non-Hazardous. Pressure Injection.

Potential Acute Health Effects

Eye Contact: May cause mild irritation.

Skin Contact: May cause mild irritation with prolonged or repeated contact.

Inhalation: No acute effects expected due to low vapor pressure.

Ingestion: Slightly toxic (LD50 > 5 gm/kg).

Subchronic and Chronic Effects:

No Known Applicable Information

Aggravated Medical Conditions: No Known Applicable Information

4. FIRST AID MEASURES

Eye Contact: Flush eyes with running water. If irritation or adverse symptoms develop, seek medical attention.

Skin Contact: Wash skin with soap and water. If irritation or adverse symptoms develop, seek medical attention.

Inhalation: Remove from exposure. If illness or adverse symptoms develop, seek medical attention.

Ingestion: If illness or adverse symptoms develop, seek medical attention.

Notes To Physician: For injection injuries, immediate medical treatment is required. Physicians may call the emergency number (911) 661-8118.

5. FIRE FIGHTING MEASURES

Flash Point: > 342F (>172C)
FP Method: COC, ASTM D-92
Ignition Temperature: Unknown

Flammable Limits (% by Volume in Air)

Lower Exposure Limit: Not Established
Upper Exposure Limit: Not Established

Fire Extinguishing Media: Carbon Dioxide, Dry Chemicals, Foam

Fire Fighting Procedures: Evacuate area and fight fire from a safe distance. Shut off source, if possible. Use NIOSH approved self-contained breathing apparatus and other protective equipment and/or garments described in Section 8 if conditions warrant. Use water spray to cool nearby containers and structures exposed to fire.

Fire and explosion hazards: Carbon oxides and various hydrocarbons forms when burned.

6. ACCIDENTAL RELEASE MEASURES
Sweep or gather up material and place in proper container for disposal or recovery.

7. HANDLING AND STORAGE

Avoid contact with eyes, skin or clothing. Avoid breathing vapors, mist, fume or dust. Use with adequate ventilation. Wear protective equipment and/or garments described in Section 8 if exposure conditions warrant. Wash thoroughly after handling. Launder contaminated clothing before reuse. Store in well-ventilated area. Store in closed container.

If pressure injected under the skin, can cause gangrene if not treated.

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Eye Protection: Wear safety glasses.

Respiratory Protection: For concentrations exceeding an applicable exposure limit, use NIOSH approved air purifying respirator equipped with P95 filters, for particles with time weighted average exposure limit not less than 0.05 mg/m³.

Skin Protection: Use gloves resistant to the material(s) contained in this product.

Ventilation: Use adequate ventilation to control concentrations below applicable exposure limits.

Other Personal Protection: Personal protection information shown in Section 8 is based upon general information as to normal uses and conditions. Where special or unusual uses or conditions exist, it is suggested that the expert assistance of an industrial hygienist or other qualified professional be sought.

Exposure Limits: OSHA PEL and ACGIH TLV for oil mists is 5 mg/m³.

10. STABILITY AND REACTIVITY

Stability: Stable

Hazardous Polymerization: Will Not Occur

Incompatibility (Materials to Avoid): Oxygen and strong oxidizing agents.
Hazardous Decomposition Products: Carbon oxides and various hydrocarbons are formed when burned.

11. TOXICOLOGICAL INFORMATION

Other Health Effects:

Pressurized injection of product under the skin can lead to seriously inflamed tissue. If left untreated injury can become gangrenous.

Prolonged and repeated exposure to oil mist poses a risk of pulmonary disease such as lung inflammation. This condition usually causes no symptoms.

Continuous skin contact with used motor oils has caused skin cancer in laboratory animals. Avoid prolonged skin contact with used motor oil.

These products may contain petroleum base oils which may be refined by various processes including severe solvent extraction, severe hydrocracking or severe hydrotreating. None of the oils require a cancer warning under the OSHA Hazard Communication Standard (29 CFR 1910.1200).

12. ECOLOGICAL INFORMATION

No data at this time.

13. DISPOSAL CONSIDERATIONS

Disposal should be made in accordance with federal, state and local regulations.

14. TRANSPORT INFORMATION

DOT Shipping Description: Not Regulated
IMDG Shipping Description: Not Regulated
ICAO/IATA Proper Shipping Name: Not Regulated

16. OTHER INFORMATION

Revision Summary: Section 3 - Format Change.

Preparer: Health, Environment and Safety Department
Date Prepared: 05/11/2001
Superseded: 03/09/2001

Phillips Petroleum Company (references to Phillips Petroleum Company or Phillips includes its divisions, affiliates and subsidiaries) believes that the information contained herein (including data and statements) is accurate as of the date hereof. NO WARRANTY OF MERCHANTABILITY, FITNESS FOR ANY PARTICULAR PURPOSE OR ANY OTHER WARRANTY, EXPRESS OR IMPLIED, IS MADE AS CONCERNING THE INFORMATION HEREBIN PROVIDED. The information provided herein relates only to the specific product designated and may not be valid where such product is used in combination with any other materials or in any process. Further, since the conditions and methods of use of the product and information referred to herein are beyond the control of Phillips, Phillips expressly disclaims any and all liability as to any results obtained or arising from any use of the product or such information. No statement made herein shall be construed as a permission or recommendation for the use of any product in a manner that might infringe existing patents.
LIMITED WARRANTY AND DISCLAIMER OF WARRANTIES

Loegering warrants its attachment against operational failures caused by defective material or workmanship, which occur during normal use within twelve (12) months from the date the product is first put into service or 1000 hours, whichever is earlier. Your sole remedy under this Warranty is repair or replacement of the attachment that are determined by Loegering to be defective in material or workmanship. Any modifications (welding, cutting, etc.) to the machine, attachment, or attachment accessories without proper authorization will void the warranty. Written authorization for any return of goods on a warranty claim must first be obtained from Loegering. All returns must be accompanied by a Returned Material Authorization Number (RMA#) and a written explanation of claimed defects with the exact circumstances of operational failure. Any products returned for warranty inspection must be shipped prepaid and will be returned freight collect. All costs of product removal and product installation are at the customer’s expense. Loegering does not warrant that its attachment will meet your requirements, nor does it assume responsibility for costs and/or damages resulting from use. THE ABOVE WARRANTY IS EXCLUSIVE AND IN LIEU OF AND TO THE EXCLUSION OF ALL OTHER WARRANTIES, WHETHER EXPRESS OR IMPLIED, INCLUDING THE IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT. NO ORAL OR WRITTEN INFORMATION OR ADVICE GIVEN BY LOEGERING MFG. INC., ITS EMPLOYEES, OR DEALERS SHALL ALTER, MODIFY, OR INCREASE THE SCOPE OF THE ABOVE WARRANTY OR CREATE ANY NEW WARRANTIES. Some states do not allow the exclusion of implied warranties, so the above exclusion may not apply to you. In that event, any implied warranties are limited in duration to ninety (90) days from the date of delivery of our attachment. This Warranty gives you specific legal rights. You may have other rights, which vary from state to state.

LIMITATIONS OF REMEDIES

Loegering’s entire liability and your exclusive remedies shall be repair or replacement of the attachment for any alleged breach, failure, or malfunction. Regardless of whether any remedy set forth herein fails of its essential purpose, in no event will Loegering be liable to you for any special, consequential, indirect, or similar damages, including any claimed damage to person (except in the case of consumer goods) or other property, any lost time, or lost profits arising out of the use or inability to use the attachment. Some states do not allow limitation or exclusion of liability for incidental or consequential damages, so the above limitation or exclusion may not apply to you.
Attachment A
Loegering Limited Warranty

Note the additional warranty information listed below in specific regards to the Loegering VTS. This attachment is a supplement to the Loegering Limited Warranty.

- The rubber track warranty is Pro-Rated for 12 months or 1000 hour’s whichever comes first after it is installed on the host machine or put into service. Hours are determined by warranty registration card, be sure to complete at time of purchase.
- System components are warranted for a period of 12 months or 1000 hours whichever comes first after it is installed on the host machine or put into service. The warranty covers defective material and/or workmanship. This does not cover the normal wear of components due to application and use. Hours are determined by warranty registration card, be sure to complete at time of purchase.
- Host machine specifications should not be exceeded with the use of the Loegering VTS. Consult your machine operator’s manual for machine capacities and specifications.
- Proper track tension is essential to the normal wear of the Loegering VTS. Consult your VTS owner’s manual for proper VTS track tension specifications.
- Loegering VTS rubber track is subject to cuts, tears, etc. when used in abrasive material. This will significantly decrease the life of your rubber track and articles such as gravel, demolition material, rebar, broken concrete, rocks, clearing debris, stumps, sand, etc. should be avoided for longer track life. The more abrasive your application, the less life you will see on your system components and rubber track.
- Loegering VTS rubber track is also subject to increased wear if used on concrete and asphalt, particularly during extreme heat. This application will also affect the life of your rubber track.
- Avoid abrupt turns on inclines to decrease the chance of derailing your rubber track from the system.
- Avoid abrupt turns to decrease the wear on the rubber track and the track assembly components.
- Loegering VTS should not be used in temperatures below -13°F.

Warranty only covers the replacement components if they are installed at an authorized Loegering VTS Dealer.

The Warranty Registration form must be filled out and sent to LOEGERING MFG. upon sale of the VTS System or at the time the VTS System is put into Service.

THE VTS SYSTEM IS NOT COVERED BY WARRANTY UNLESS THE WARRANTY REGISTRATION FORM IS SENT TO LOEGERING MFG.
Warranty Registration Form
Please complete and return to Loegering to validate warranty.
