

Versatile Track System™

VTS™

***“Unleash
the Performance!”***

Maximize Skid Steer Performance

Your skid steer can have more performance than you've ever imagined. All it takes is the Versatile Track System™ (VTS™) and under an hour for the conversion. With the VTS suspended rubber tracks, your skid steer has significantly more traction and stability. Work faster, harder and in more ground conditions than ever before. Adding VTS is the quickest, most economical way to expand the range of jobs your skid steer can handle.

Double Skid Steer Versatility

Get the versatility of two machines in one when you add the VTS to your skid steer. Work in extreme conditions that used to require a compact track loader. VTS quickly pays for itself by letting your skid steer take on more jobs and get them done faster than ever before.

Convert ANY skid steer to the Versatile Track System™

- ◆ Fully sealed bearings for minimal maintenance
- ◆ High-performance torque
- ◆ Operates with 2-speed machines

- ◆ Uses improved ride/traction rubber track with proprietary multi-fit design

- ◆ Low ground pressure
- ◆ Independent bi-directional torsion suspension provides improved operator comfort and increased traction
- ◆ Adjustable components designed to fit wheelbases from 35 - 55 inches

Minimize Your Operating Costs

When you sometimes need a rubber track loader instead of a skid steer, the VTS can give you the best performance, most versatility, and the lowest possible operating costs. Optimize your skid steer by changing from tires to suspended rubber tracks as needed. Minimize machine depreciation, get the lowest track maintenance and repair costs and maximize your current machine investment.

Simple Installation

Jack-up skid steer and remove tires

Transfer VTS to

Align the drive sprocket on the VTS with the rear drive axle of the skid steer and bolt on

Align the front hub assembly and bolt on

Torque all wheel nuts to 190 ft/lbs
